

The Safebox 100+5 provides additional functional switches for a Safebox Installation. Connecting through a 25mm hole for conduit fittings, this compact unit adds an extra 5 distribution switches to any installation.

Additional terminals allow multiple 100+5 to be used at once to accommodate for every circumstance.

The unit can be mounted individually to standard bracketry, or directly connected on top of a 105 or 105/SA with attaching brackets.

Product features:

- Class II Distribution Unit (690V rated).
- 5 Isolators to control the functional outputs.
- BS88 Fuse Carriers.
- Terminals to accommodate cables up to 16mm.
- 25mm output glanding holes to accommodate standard Class II conduit fittings for output wiring.

Extras & Spares

Option	Description
105 Connection Brackets	A connection bracket will allow a 100 + 5 to mount directly onto the top of a 105 style Safebox.
Location Case Mounting Kit	A mounting kit fixes to the feet of the Safebox with standard M8 fixings, and increases the distance of the mounting holes centers to 460mm to allow for installation directly onto the uprights of a small apparatus case.
Rails and Bracketry	Henry Williams also manufacture all standard BRS-SM 440 rails and bracketry to mount Safeboxes. For more information, please visit our website or contact us.
