

Domino Mimic Diagram Spares

PRODUCT PROFILE

Mimic diagrams, in a variety of formats, have been manufactured by HWE Ltd for many years, with the premier style being the Domino[®] type. The original design of the Domino[®] style mimic was tailored to suit the railway industry, which required an easily modified system, that at the same time would be capable of maintaining safety at the highest level combined with a long operational life.

Where surface coatings are required, as in the case of Domino[®], the final finish is coated in a protective film of varnish which protects it from body acids during use. The paint finish employed is stove enamelling and paint thickness and uniformity is carefully monitored.

One of the advantages of the unit construction is that an existing Domino[®] Mosaic Panel, which generally comprises of a quantity of metal tiles, 40 x 40 or 80 x 80 or a combination of both sizes, indications and switches, can easily and at any time be adapted to changes in an installation.

Therefore, should you have a requirement to modify or repair a Domino[®] Mosaic Panel, we have the facility to manufacture any style of active block or tile to fulfil your requirements.
