

Profile

The HW Universal Switch Clamp comprising a forged body, giving maximum strength which fits over one side of the rail foot and adjustable screw which clamps the switch blade to the stock rail.

For locking the rail to isolate switches during critical movements, maintenance or in un-used sidings.

Wide Range of Application

Suitable for switch points manufactured from any rail section from 46 1/4 CGR upwards.

Quick Action

Rotating pivot stud enables screw to be quickly swung clear or rail foot.

Ball and Socket Swivel Pad

Ensures efficient clamping and prevents the clamp from moving along the rail when the screw is tightened.

Four Position Locking Handle

Ensures positive locking for every quarter turn of the screw.

Spring Loading

Assists correct location before tightening.

Product Use

Extensively used by companies both in the UK and worldwide.
